## II. Envelope Equations

Paraxial Ray Equation

Envelope equations for axially  
symmetric beams

Cartesian equation of motion

Envelope equations for elliptically  
symmetric beams

John Barnard  
Steven Lund  
USPAS  
June 2008

## Roadmap:

Single particle equation with Lorentz force  
 $q(\mathbf{E} + \mathbf{v} \times \mathbf{B})$

Make use of:

1. Paraxial (near-axis) approximation  
( $r \ll 1/k_{\beta 0}$  and  $x' = v_x/v_z \ll 1$ )
2. Conservation of canonical angular momentum
3. Axisymmetry  $f(r, z)$

Paraxial Ray Equation for Single Particle

Next take statistical averages over the distribution function

⇒ Moment equations

Express some of the moments in terms of the rms radius and emittance

⇒ Envelope equations (axi-symmetric case)

Some focusing systems have quadrupolar symmetry  
Redefine envelope equations in cartesian coordinates  
( $x, y, z$ ) rather than radial ( $r, z$ )

START WITH NEWTON'S EQUATION WITH THE LORENTZ FORCE:

$$\frac{d\mathbf{p}}{dt} = q(\mathbf{E} + \mathbf{v} \times \mathbf{B})$$

In cartesian coordinates:

$$\frac{d}{dt}(\gamma m \dot{x}) = \gamma m \ddot{x} + \dot{\gamma} m \dot{x} = q(E_x + \dot{y} B_z - \dot{z} B_y)$$

$$\frac{d}{dt}(\gamma m \dot{y}) = \gamma m \ddot{y} + \dot{\gamma} m \dot{y} = q(E_y + \dot{z} B_x - \dot{x} B_z)$$

$$\frac{d}{dt}(\gamma m \dot{z}) = \gamma m \ddot{z} + \dot{\gamma} m \dot{z} = q(E_z + \dot{x} B_y - \dot{y} B_x)$$

In cylindrical coordinates: (use  $\frac{d\hat{e}_r}{dt} = \hat{e}_\theta \dot{\theta}$ ;  $\frac{d\hat{e}_\theta}{dt} = -\hat{e}_r \dot{\theta}$ )

$$\frac{d}{dt}(\gamma m \dot{r}) - \gamma m r \dot{\theta}^2 = q(E_r + r \dot{\theta} B_z - \dot{z} B_\theta) \quad (I)$$

$$\frac{1}{r} \frac{d}{dt}(\gamma m r^2 \dot{\theta}) = q(E_\theta + \dot{z} B_r - \dot{r} B_z) \quad (II)$$

$$\frac{d}{dt}(\gamma m \dot{z}) = q(E_z + \dot{r} B_\theta - r \dot{\theta} B_r) \quad (III)$$

When  $\frac{\partial}{\partial \theta} = 0$ :

$$\mathbf{E} = -\nabla \Phi = \hat{e}_r \left[ -\frac{\partial \Phi}{\partial r} \right] + \hat{e}_\theta \left[ -\frac{\partial \Phi}{\partial \theta} \right] + \hat{e}_z \left[ -\frac{\partial \Phi}{\partial z} \right]$$

$$\mathbf{B} = \nabla \times \mathbf{A} = \hat{e}_r \left[ \frac{\partial A_\theta}{\partial z} - \frac{\partial A_z}{\partial \theta} \right] + \hat{e}_\theta \left[ \frac{\partial A_r}{\partial z} - \frac{\partial A_z}{\partial r} \right] + \hat{e}_z \left[ \frac{1}{r} \frac{\partial}{\partial r}(r A_\theta) \right]$$

$$\begin{aligned} q r (E_\theta + \dot{z} B_r - \dot{r} B_z) &= q \left( -\frac{\partial r A_\theta}{\partial t} - \dot{z} \frac{\partial r A_\theta}{\partial z} - \dot{r} \frac{\partial}{\partial r}(r A_\theta) \right) \\ &= -q \left[ \frac{\partial}{\partial t} + \mathbf{v} \cdot \frac{\partial}{\partial \mathbf{x}} \right] (r A_\theta) \\ &= -q \frac{d(r A_\theta)}{dt} \end{aligned} \quad (IV)$$

$$\text{Eqn II} \Rightarrow \frac{d}{dt} (-\gamma m r^2 \dot{\theta} + q r A_\theta) = 0$$

$$\underline{p} = p_r \hat{e}_r + p_\theta^* \hat{e}_\theta + p_z \hat{e}_z$$

where  $p_r = \gamma m \dot{r}$

$$p_\theta^* = \gamma m r \dot{\theta}$$

$$p_z = \gamma m \dot{z}$$

$$\frac{d\underline{r}}{dt} = \dot{p}_r \hat{e}_r + p_r \dot{\hat{e}}_r + \dot{p}_\theta^* \hat{e}_\theta + p_\theta^* \dot{\hat{e}}_\theta + \dot{p}_z \hat{e}_z$$

$$\Rightarrow \frac{d\underline{r}}{dt} = (\dot{p}_r - p_\theta^* \dot{\theta}) \hat{e}_r + (p_r \dot{\theta} + \dot{p}_\theta^*) \hat{e}_\theta + \dot{p}_z \hat{e}_z$$

WHERE WE HAVE USED:

$$\frac{d\hat{e}_r}{dt} = \hat{e}_\theta \dot{\theta}$$

$$\frac{d\hat{e}_\theta}{dt} = -\hat{e}_r \dot{\theta}$$

$$\Rightarrow \frac{d\underline{r}}{dt} = \left[ \frac{d}{dt} (\gamma m \dot{r}) - \frac{d}{dt} (\gamma m r \dot{\theta}) \right] \hat{e}_r$$

$$+ \left[ \gamma m r \dot{\theta} + \frac{d}{dt} (\gamma m r \dot{\theta}) \right] \hat{e}_\theta$$

$$= \frac{1}{r} \frac{d}{dt} (\gamma m r^2 \dot{\theta})$$

$$+ \frac{d}{dt} (\gamma m \dot{z}) \hat{e}_z$$

(NOTE: ON THIS PAGE  $p_\theta^* \equiv \theta$ -component of MECHANICAL MOMENTUM

NOT TO BE CONFUSED WITH  $p_\theta = \gamma m r^2 \dot{\theta} + q \hbar A_\theta \equiv \theta$ -component OF CANONICAL ANGULAR MOMENTUM)

## CONSERVATION OF CANONICAL ANGULAR MOMENTUM

J. BARNARD (2)

DEFINE  $p_\theta = \gamma m r^2 \dot{\theta} + q r A_\theta$

$$\frac{d}{dt} p_\theta = 0$$

(CONSERVATION OF  
CANONICAL ANGULAR MOMENTUM)

NOTE THAT THE FLUX ENCLOSED BY A CIRCLE OF RADIUS  $r$

$$\psi = \int \underline{B} \cdot d\underline{A} = \int (\nabla \times \underline{A}) \cdot d\underline{A} = \oint \underline{A} \cdot d\underline{l} = 2\pi r A_\theta$$

$$p_\theta = \gamma m r^2 \dot{\theta} + \frac{q}{2\pi} \psi$$

IS CONSERVED ALONG AN ORBIT  
IN AXISYMMETRIC GEOMETRIES

"EXTERNAL"

(REISEL SECTION 3.3)

# ELECTRIC & MAGNETIC FIELDS WITH RADIAL SYMMETRY

J. BALWANT

(3)

CONSIDER THE EXTERNAL FIELD:

(TIME STEADY VACUUM SOLUTION)

$$\nabla \times \underline{B} = 0$$

$$\nabla \times \underline{E} = 0$$

$$\nabla \cdot \underline{B} = 0$$

$$\nabla \cdot \underline{E} = 0$$

$$\Rightarrow \underline{E} \text{ \& } \underline{B} = -\nabla \Phi$$

$$\text{Let } \Phi = \sum_{\nu=0}^{\infty} f_{2\nu}(z) r^{2\nu}$$

$$\nabla^2 \Phi = 0 \Rightarrow \Phi = \sum_{\nu=0}^{\infty} \frac{(-1)^\nu}{\nu!} \frac{\partial^{2\nu} f(0,z)}{\partial z^{2\nu}} \left(\frac{r}{2}\right)^{2\nu}$$

$$\Rightarrow \Phi = \Phi(0,z) - \frac{1}{4} \frac{\partial^2 \Phi(0,z)}{\partial z^2} r^2 + \frac{1}{64} \frac{\partial^4 \Phi(0,z)}{\partial z^4} r^4$$

$$\text{Let } B_z(0,z) = B(z)$$

$$\text{Let } \Phi(0,z) = V(z)$$

$$B_z(r,z) = B(z) - \frac{r^2}{4} \frac{\partial^2 B}{\partial z^2} + \frac{r^4}{64} \frac{\partial^4 B}{\partial z^4} + \dots$$

$$B_r(r,z) = -\frac{r}{2} \frac{\partial B}{\partial z} + \frac{r^3}{16} \frac{\partial^3 B}{\partial z^3} + \dots$$

$$\Phi(r,z) = V(z) - \frac{1}{4} V'' r^2 + \frac{r^4}{64} \frac{\partial^4 V}{\partial z^4}$$

$$\Rightarrow E_r = \frac{1}{2} V'' r - \frac{r^3}{16} \frac{\partial^4 V}{\partial z^4}$$

$$\text{Also, } \psi \approx \pi r^2 B(z)$$

$$\nabla^2 \phi = \frac{1}{r} \frac{\partial}{\partial r} \left( r \frac{\partial \phi}{\partial r} \right) + \frac{\partial^2 \phi}{\partial z^2} = 0$$

$$f(r, z) = \sum_{n=0}^{\infty} f_{2n}(z) r^{2n} = f_0 + f_2 r^2 + f_4 r^4$$

$$\sum_{n=1}^{\infty} [2n + 2n(n-1)] f_{2n} r^{2n-2} + \sum_{n=0}^{\infty} f_{2n}'' r^{2n} = 0$$

(4)

## PARAXIAL RAY EQUATION

$$(I) \Rightarrow \underbrace{\frac{d}{dt}(\gamma m \dot{r})}_{\text{INERTIAL}} - \underbrace{\gamma m r \dot{\theta}^2}_{\text{CENTRIFUGAL}} = q \left( \underbrace{\frac{V''}{2} r}_{E_r^{\text{external}}} + r \underbrace{\dot{\theta} B}_{V_{\theta} B_z^{\text{external}}} \right) + q \left( \underbrace{E_r^{\text{self}}}_{\text{SELF FIELDS}} - \underbrace{v_z B_{\theta}^{\text{self}}}_{\text{SELF FIELDS}} \right)$$

Now use  $s$  as independent variable  $v_z dt = ds$

$$v_z \frac{d}{ds} (\gamma m v_z r') - \gamma m v_z^2 r \theta'^2 = q \left( \frac{V''}{2} r + r v_z \theta' B \right) + q (E_r^{\text{self}} - v_z B_{\theta}^{\text{self}})$$

EXPANDING 1<sup>st</sup> term and  $v_z \approx v$ ; AND DIVIDING BY  $\gamma m v^2$ :

$$r'' - r \theta'^2 + \frac{\gamma'}{\beta \gamma} r' = \frac{q}{\gamma m \beta^2 c^2} \left( \frac{V''}{2} r + r \beta c \theta' B + E_r^{\text{self}} - v_z B_{\theta}^{\text{self}} \right) \quad (P1)$$

Using CANONICAL MOMENTUM, eliminate  $\theta'$  via

$$\theta' = \frac{p_{\theta} - \frac{q\psi}{2\pi}}{\gamma m r^2 \beta c} = \frac{p_{\theta}}{\gamma m r^2 \beta c} - \frac{qB}{2\gamma \beta m c} = \frac{p_{\theta}}{\gamma m r^2 \beta c} - \frac{\omega_c}{2\gamma \beta c}$$

where we define  $\omega_c \equiv \frac{qB}{m}$

ADDING THE TWO  $\theta'$  TERMS IN THE EQUATION (P1)

$$\begin{aligned} -r \theta'^2 - \frac{r \omega_c \theta'}{\gamma \beta c} &= \frac{-p_{\theta}^2}{\gamma^2 m^2 r^3 \beta^2 c^2} + \frac{p_{\theta} \omega_c}{\gamma^2 m \beta^2 c^2 r} - \frac{r \omega_c^2}{4 \gamma^2 \beta^2 c^2} \\ &\quad - \frac{p_{\theta} \omega_c}{\gamma^2 m \beta^2 c^2 r} + \frac{r \omega_c^2}{2 \gamma^2 \beta^2 c^2} \\ &= \frac{-p_{\theta}^2}{\gamma^2 m^2 r^3 \beta^2 c^2} + \frac{r \omega_c^2}{2 \gamma^2 \beta^2 c^2} \end{aligned}$$

So equation (P1) becomes:

$$r'' + \frac{\gamma'}{\beta^2 \gamma} r' = \frac{q}{\gamma m \beta^2 c^2} \left( \frac{V''}{2} r \right) + \frac{r \omega_c^2}{2 \gamma^2 \beta^2 c^2} + \frac{p_0^2}{\gamma^2 m^2 \beta^2 c^2} + \frac{q}{\gamma m \beta^2 c^2} \left[ E_r^{\text{self}} - v_z B_\theta^{\text{self}} \right] \quad (\text{P2})$$

Now  $\gamma' m c^2 = q \frac{E \cdot v}{v_z}$  so  $\gamma'' = \left( V'' + \frac{\partial^2 \phi^{\text{self}}}{\partial z^2} \right) \frac{q}{m c^2}$

CALCULATING  $\frac{q}{\gamma m \beta^2 c^2} \left[ \frac{V''}{2} r + E_r^{\text{self}} - v_z B_\theta^{\text{self}} \right]$ :

$$\nabla^2 \phi^{\text{self}} = -\frac{\rho}{\epsilon_0} \Rightarrow \frac{1}{r} \frac{\partial}{\partial r} \left( r \frac{\partial \phi}{\partial r} \right) = -\frac{\rho}{\epsilon_0} - \frac{\partial^2 \phi^{\text{self}}}{\partial z^2}$$

$$\Rightarrow \frac{\partial}{\partial r} \left( r \frac{\partial \phi}{\partial r} \right) = -\frac{r \rho(r)}{\epsilon_0} - \frac{r \partial^2 \phi^{\text{self}}}{\partial z^2}$$

$$r \frac{\partial \phi}{\partial r} = -\frac{1}{2\pi \epsilon_0} \int_0^r 2\pi r' \rho(r') dr - \frac{r^2}{2} \frac{\partial^2 \phi}{\partial z^2}$$

$$= -\frac{1}{2\pi \epsilon_0} \lambda(r) - \frac{r^2}{2} \frac{\partial^2 \phi^{\text{self}}}{\partial z^2}$$

$$\Rightarrow E_r^{\text{self}} = \frac{\lambda(r)}{2\pi \epsilon_0 r} + \frac{r}{2} \frac{\partial^2 \phi^{\text{self}}}{\partial z^2}$$

$$\nabla \times \underline{B} = \mu_0 \underline{J} \Rightarrow 2\pi r B_\theta = \mu_0 \int_0^r 2\pi r' J_z(r') dr = \mu_0 v_z \lambda(r)$$

$$B_\theta^{\text{self}} = \frac{\mu_0 v_z \lambda(r)}{2\pi r} = \frac{v_z}{c^2} \frac{\lambda(r)}{2\pi \epsilon_0 r}$$

$$\left[ \frac{V''}{2} r + E_r^{\text{self}} - v_z B_\theta^{\text{self}} \right] = \left[ \underbrace{\frac{r}{2} \left( V'' + \frac{\partial^2 \phi^{\text{self}}}{\partial z^2} \right)}_{-\frac{m c^2}{q} \gamma''} + \underbrace{\left( 1 - \frac{v_z^2}{c^2} \right) \frac{\lambda(r)}{2\pi \epsilon_0 r}}_{1/r^2} \right]$$

So equation (P2) becomes: "THE PARAXIAL RAY EQUATION:"

$$r'' + \frac{\gamma'}{\beta^2 \gamma} r' + \frac{\gamma''}{2\beta^2 \gamma} r + \left( \frac{\omega_c}{2\gamma\beta c} \right)^2 r - \left( \frac{p_0}{\gamma\beta mc} \right)^2 \frac{1}{r^3} - \frac{q}{\gamma^3 m v_z^2} \frac{\lambda(r)}{2\pi E r} = 0$$

INERTIAL

$E_r$   
(CONVERGENCE  
OF  
FIELD  
LINES)

$V_b B_z$   
- CENTRIFUGAL

CENTRIFUGAL

SELF  
FIELD

MOMENT EQUATIONS

Vlasov eqn:  $\frac{\partial f}{\partial s} + x' \frac{\partial f}{\partial x} + x'' \frac{\partial f}{\partial x'} + y' \frac{\partial f}{\partial y} + y'' \frac{\partial f}{\partial y'} = 0$

Let  $g = g(x, x', y, y')$ ;  $N = \iiint f dx dx' dy dy'$

Multiply Vlasov equation by  $g$  &  $\frac{1}{N} \iiint dx dx' dy dy'$

$$\int dx dx' dy dy' \left[ g \frac{\partial f}{\partial s} + g x' \frac{\partial f}{\partial x} + g x'' \frac{\partial f}{\partial x'} + g y' \frac{\partial f}{\partial y} + g y'' \frac{\partial f}{\partial y'} \right] = 0$$

$$\Rightarrow \frac{d}{ds} \langle g \rangle + \underbrace{\frac{1}{N} \iiint g f \left[ - \frac{1}{N} \iiint \frac{\partial g}{\partial x} f x' + \dots \right]}_{\substack{\text{INTEGRATE BY PARTS} \\ \rightarrow 0}} = 0$$

$= \langle x' \frac{\partial g}{\partial x} \rangle$

$$\Rightarrow \frac{d}{ds} \langle g \rangle = \langle x' \frac{\partial g}{\partial x} \rangle + \langle x'' \frac{\partial g}{\partial x'} \rangle + \langle y' \frac{\partial g}{\partial y} \rangle + \langle y'' \frac{\partial g}{\partial y'} \rangle$$

$$\text{But } \frac{dg}{ds} = \frac{\partial g}{\partial x} x' + \frac{\partial g}{\partial x'} x'' + \frac{\partial g}{\partial y} y' + \frac{\partial g}{\partial y'} y''$$

$$\Rightarrow \frac{d}{ds} \langle g \rangle = \langle g' \rangle$$

So  $\frac{d}{ds} \langle x^2 \rangle = 2 \langle x x' \rangle$

$$\frac{d}{ds} \langle x'^2 \rangle = 2 \langle x' x'' \rangle \quad \text{etc...}$$

$$\frac{d}{ds} \langle x x' \rangle = \langle x x'' \rangle + \langle x'^2 \rangle$$

# ENVELOPE EQUATION FOR AXISYMMETRIC BEAMS

$$\text{LET } r_b^2 = 2\langle r^2 \rangle = 2(\langle x^2 \rangle + \langle y^2 \rangle) = 4\langle x^2 \rangle$$

for an  
axisymmetric  
beam

$$2r_b r_b' = 4\langle r r' \rangle \quad \Rightarrow \quad r_b' = \frac{2\langle r r' \rangle}{r_b}$$

$$\begin{aligned} r_b'' &= \frac{2\langle r r'' \rangle + 2\langle r'^2 \rangle}{r_b} - \frac{2\langle r r' \rangle}{r_b^2} \left( \frac{2\langle r r' \rangle}{r_b} \right) \\ &= 2 \frac{\langle r r'' \rangle}{r_b} + \frac{4\langle r'^2 \rangle}{r_b^2} - 4 \frac{\langle r r' \rangle^2}{r_b^3} \end{aligned}$$

WHAT IS  $\langle r r'' \rangle$ ?

Recall Equation P1 (on path to Laxial Ray Equation):

$$r'' - r\theta'^2 + \frac{\gamma'}{\beta^2 \gamma} r' = \frac{q}{\gamma m \beta^2 c^2} \left( \frac{V''}{2} r + r \rho c \theta' B + E_r^{\text{self}} - V_e B_z^{\text{self}} \right)$$

P1 may be rewritten:

$$r'' - r\theta'^2 + \frac{\gamma'}{\beta^2 \gamma} r' = \frac{q}{\gamma m \beta^2 c^2} \left[ \frac{-mc^2}{q} \gamma'' \frac{r}{2} + \frac{\lambda(r)}{\gamma^2 2\pi \epsilon_0 r} + r \rho c \theta' B \right]$$

$$\boxed{r'' + \frac{\gamma'}{\beta^2 \gamma} r' + \frac{\gamma''}{2\beta^2 \gamma} r - \frac{q}{\gamma^3 m v_z^2} \frac{\lambda(r)}{2\pi \epsilon_0 r} - \frac{\omega_c}{\gamma \rho c} \theta' r - r\theta'^2 = 0}$$

What is  $\langle r r'' \rangle$ ?

$$\langle r r'' \rangle + \frac{-\omega_c}{\gamma \rho c} \langle \theta' r^2 \rangle - \langle r^2 \theta'^2 \rangle + \dots = 0$$

$$\begin{aligned} \langle p_\theta \rangle^2 &= \gamma^2 m^2 \beta^2 c^2 \langle r^2 \theta'^2 \rangle + \frac{\omega_c^2}{4} m^2 \langle r^2 \rangle^2 + \omega_c \gamma m^2 \rho c \langle r^2 \theta' \rangle \langle r' \rangle \\ \Rightarrow \frac{-\omega_c}{\gamma \rho c} \langle \theta' r^2 \rangle &= \frac{-\omega_c}{\gamma \rho c} \left[ \frac{\langle p_\theta \rangle^2}{\omega_c \gamma m^2 \beta^2 c^2 \langle r^2 \rangle} - \frac{\omega_c \langle r^2 \rangle}{4 \gamma \rho c} - \frac{\gamma \rho c \langle r^2 \theta'^2 \rangle}{\omega_c \langle r^2 \rangle} \right] \\ \Rightarrow \langle r r'' \rangle &= \frac{\langle p_\theta \rangle^2}{\gamma^2 m^2 \beta^2 c^2 \langle r^2 \rangle} - \frac{\omega_c^2 \langle r^2 \rangle}{4 \gamma^2 \beta^2 c^2} - \frac{\langle r^2 \theta'^2 \rangle}{\langle r^2 \rangle} + \dots = 0 \end{aligned}$$

$$\Rightarrow \langle r r'' \rangle = \frac{\gamma'}{\beta^2 \gamma} \langle r r' \rangle + \frac{\gamma''}{2\beta^2 \gamma} \langle r^2 \rangle - \frac{q}{\gamma^3 m v_z^2} \frac{\langle \lambda(r) \rangle}{2\pi \epsilon_0} +$$

$$\frac{\langle p_0 \rangle^2}{(\gamma m \beta c)^2 \langle r^2 \rangle} - \frac{\omega_c^2 \langle r^2 \rangle}{4(\gamma \beta c)^2} - \frac{\langle r^2 \theta'^2 \rangle}{\langle r^2 \rangle} + \langle r^2 \theta'^4 \rangle$$

$$r_b'' = \frac{2\langle r r'' \rangle}{r_b} + \frac{4\langle r^2 \rangle \langle r'^2 \rangle - 4\langle r r' \rangle^2}{r_b^3}$$

$$= \frac{\gamma'}{\beta^2 \gamma} \frac{2\langle r r' \rangle}{r_b} + \frac{\gamma''}{2\beta^2 \gamma} \frac{2\langle r^2 \rangle}{r_b} - \frac{2q}{\gamma^3 m v_z^2} \frac{\langle \lambda(r) \rangle}{2\pi \epsilon_0} \frac{1}{r_b}$$

$$+ \frac{\langle p_0 \rangle^2}{(\gamma m \beta c)^2} \frac{2}{\langle r^2 \rangle r_b} - \frac{\omega_c^2}{4(\gamma \beta c)^2} \frac{2\langle r^2 \rangle}{r_b} - \frac{2\langle r^2 \theta'^2 \rangle}{r_b \langle r^2 \rangle}$$

$$+ \frac{2\langle r^2 \theta'^4 \rangle}{r_b} + \frac{4\langle r^2 \rangle \langle r'^2 \rangle - 4\langle r r' \rangle^2}{r_b^3}$$

Using  $r_b^2 \equiv 2\langle r^2 \rangle$  &  $r_b' = \frac{2\langle r r' \rangle}{r_b}$

ENVELOPE EQUATION

$$\Rightarrow \left\{ r_b'' + \frac{\gamma'}{\beta^2 \gamma} r_b' + \frac{\gamma''}{2\beta^2 \gamma} r_b + \left( \frac{\omega_c}{2\gamma \beta c} \right)^2 r_b + \right.$$

$$\left. \frac{-4\langle p_0 \rangle^2}{(\gamma m \beta c)^2 r_b^3} - \frac{E_r^2}{r_b^3} - \frac{Q}{r_b} = 0 \right\}$$

WHERE  $E_r^2 = 4(\langle r^2 \rangle \langle r'^2 \rangle - \langle r r' \rangle^2) + \langle r^2 \rangle \langle r^2 \theta'^4 \rangle - \langle r^2 \theta'^2 \rangle^2$

# ENVELOPE EQUATION -- CONTINUED

$$r_b'' + \frac{\gamma'}{\beta^2 \gamma} r_b' + \frac{\gamma''}{2\beta^2 \gamma} r_b + \left( \frac{\omega_c}{2\gamma\beta c} \right)^2 r_b - \frac{4\langle p_0 \rangle^2}{(\gamma m \beta c)^2} r_b^3 - \frac{-E_r^2}{r_b^3} - \frac{Q}{r_b} = 0$$

COMPARE WITH THE SINGLE PARTICLE PARAXIAL RAY EQUATION:

$$\underbrace{r'' + \frac{\gamma'}{\beta^2 \gamma} r'}_{\text{INITIAL}} + \underbrace{\frac{\gamma''}{2\beta^2 \gamma} r}_{E_r} + \underbrace{\left( \frac{\omega_c}{2\gamma\beta c} \right)^2 r}_{V_0 B_z - \text{CENTRIFUGAL}} - \underbrace{\left( \frac{p_0}{\gamma m \beta c} \right)^2 \frac{1}{r^3}}_{\text{CENTRIFUGAL}} - \underbrace{\frac{q}{\gamma^3 m V_z^2} \frac{\lambda(r)}{2\pi \epsilon_0 r}}_{E_r - V_z B_0 \text{ self field}}$$

$$E_r^2 = 4(\langle v^2 \rangle \langle v'^2 \rangle - \langle r r' \rangle^2 + \langle v^2 \rangle \langle v'^2 \theta'^2 \rangle - \langle v^2 \theta' \rangle^2)$$

NOTE THAT FOR AXISYMMETRIC BEAMS ( $\rho = \rho(r)$  ONLY)

$$\langle v^2 \rangle = \langle x^2 \rangle + \langle y^2 \rangle = 2\langle x^2 \rangle$$

$$\Rightarrow 2\langle r r' \rangle = 4\langle x x' \rangle$$

$$\& \langle x'^2 \rangle + \langle y'^2 \rangle = 2\langle x'^2 \rangle = \langle v'^2 \rangle + \langle v'^2 \theta'^2 \rangle$$

$$\text{DEFINE } E_x^2 = 16(\langle x^2 \rangle \langle x'^2 \rangle - \langle x x' \rangle^2)$$

$$\Rightarrow \boxed{E_r^2 = E_x^2 - 4\langle r^2 \theta' \rangle^2}$$

For  $\nabla \cdot \mathbf{E} = 0$  or  $\nabla \times \mathbf{B} = 0$

EXPAND FIELD IN CYLINDRICAL "MULTIPOLES":

$$E_r, B_r = \sum_{n=1}^{\infty} f_n r^{n-1} \cos(n\theta)$$

$$E_\theta, B_\theta = \sum_{n=1}^{\infty} f_n r^{n-1} \sin(n\theta)$$

$$\begin{aligned} E_x &= E_r \cos \theta - E_\theta \sin \theta \\ E_y &= E_r \sin \theta + E_\theta \cos \theta \end{aligned}$$

$$n=1 \Rightarrow \text{dipole} \quad \begin{cases} E_r = f_1 \cos \theta \\ E_\theta = -f_1 \sin \theta \end{cases} \Rightarrow \begin{cases} E_x = f_1 \\ E_y = 0 \end{cases}$$

$$n=2 \Rightarrow \text{quadrupole} \quad \begin{cases} E_r = f_2 r \cos 2\theta \\ E_\theta = -f_2 r \sin 2\theta \end{cases} \Rightarrow \begin{cases} E_x = f_2 x \\ E_y = -f_2 y \end{cases}$$

NOTE: ABOVE EXPANSION IS VALID WHEN  $\mathbf{E}$  or  $\mathbf{B} \neq \text{function}(z)$ .  
FOR MAGNETS OF FINITE AXIAL EXTENT, FOR EACH FUNDAMENTAL  
n-pole, A SET OF HIGHER ORDER MULTIPOLES WITH SAME AZIMUTHAL  
SYMMETRY ARE REQUIRED TO SATISFY  $\nabla^2 \phi = 0$ .

FOR EXAMPLE FOR A FUNDAMENTAL QUADRUPOLE THE FIELD MAY BE  
EXPANDED:

$$E_r = \sum_{v=0}^{\infty} f_{2,v}(z) [1+v] r^{1+2v} \cos[2\theta]$$

$$E_\theta = \sum_{v=0}^{\infty} -f_{2,v}(z) r^{1+2v} \sin[2\theta]$$

$$E_z = \sum_{v=0}^{\infty} \frac{1}{2} \frac{df_{2,v}}{dz} r^{2+2v} \cos 2\theta$$

with  $f_{2,v+1}(z) = \frac{-1}{4(v+1)(v+3)} \frac{d^2 f_{2,v}}{dz^2}(z)$

SEE LUND, S. M. (1996)  
FOR EXAMPLE. HIF note 96-  
LNL.

Heavy ion accelerators use alternating gradient quadrupoles to focus (confine) the beams (non-neutral plasmas)

Space-charge forces and thermal forces act to expand beam

Quadrupoles (magnetic or electric):

- alternately provide inward then outward impulse
- focus in one plane and defocus in other
- act as linear lenses. (Force proportional to distance from axis).

Horizontal (x) plane:

Wire conductors

Magnetic quad

Vertical (y) plane:

Average displacement is larger in focusing lenses so the net effect is focusing.

Cylindrical electrodes

Electric quad

# Space charge reduces betatron phase advance
